

74 ORGANIZATIONS SUPPORT S. 5041

Patient organizations. Health care professionals. Advocacy groups.
One shared call to improve pain care.

The bipartisan **Advancing Research for Chronic Pain Act of 2026 (ARCPA), S. 5041**, would improve and standardize federal data collection on chronic pain—giving researchers, policymakers, and health care professionals a clearer picture of its impact and treatment needs. It would also create a *Chronic Pain Information Hub* to make federal research data easier to access and share. **Better data can drive better policy, better care, and better outcomes for millions of Americans living with chronic pain.**

ORGANIZATIONS SUPPORTING S. 5041
